

Hubspot : Prerequisite

Please find the below details about the Hubspot:

Software: Python

Installation Steps:

Install dependencies for odoo HubSpot Connector.

Step1: Run following command in terminal: *pip install hubspot-connection*
OR

Download package from the link:

<https://files.pythonhosted.org/packages/8b/41/8f6491ba6c8bd9c80001fdec6e78f1889d7be536e07acc1c5f1af580d6dc/hubspot-connection-1.0rc8.post0.tar.gz>

Extract it, Go to the extracted folder via terminal, and run the command: *python setup.py install*

Step2: Update app list and install the module named as `pragmatic_hubspot_connector`.

Step3: Go to Hubspot CRM, select the **integrations** option under **settings**, Click on add a new **app**, give the name to the app, you can find the key in your created app. Copy it.

Step4: Now Open Company settings in Odoo, you will find HubSpot tab down, paste the key in **hubspot key** over there. In **Name**, option Give the name of your app.

Step5: Once this is done you are ready to sync contacts, leads, opportunities and products from Hubspot to odoo by clicking on respective buttons in the same window.
